FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS.

TO PLAY A KEY ROLLE IN THE DEVELOPMENT OF THE DENTIAL PLAQUE BECAUSE

OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE

AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

CATALYTIC ACTIVITY: SUCTOSE + {(1,6)-alpha-D-glucosyl}(N) = D-fractose + {(1,6)-alpha-D-glucosyl}(N+1).

SUBCELLAULAR LOCATION: Secreted.

MISCELLAULAR LOCATION: Secreted.

C. -I- FUNCTION: The UvrABC repair system catalyzes the recognition and processing of DNA Lesions. UvrC both incises the 5' and 3' sides incision and the C-terminal half is responsible for the 3' incision and the C-terminal half is responsible for the 5' incision (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   10-OCT-2003 (Rel. 42, C

                                                                                                                                                                                                                                                                                                                FUNCTION: The glycine cleavage system catalyzes the degradat: glycine. The protein binds the alpha-amino group of glycine through its pyridoxal phosphate cofactor; CO(2) is released the remaining methylamine moiety is then transferred to the lipoamide cofactor of the H protein (By similarity). CAPALIYIC ACTIVITY: Glycine + lipoyiprotein = S-aminomethyldihydrolipoylprotein + CO(2). COPACTOR: Pyridoxal phosphate (By similarity). SUBUNIT: The glycine cleavage system is composed of four prosuments.
                                                                                                                                                                                                                                                                               P, T, L and H (By similarity).

-!- DOMAIN: CONSISTS OF FIVE MODULES WITH TWO EPIMERIZATION DOMAINS IN THE SECOND AND FOURTH MODULES, AND A PUTATIVE C-TERMINAL THIS SECOND AND FOURTH MODULES, AND A PUTATIVE C-TERMINAL THIOSSTERASE DOMAIN. EACH MODULE INCORPORATES ONE AMINO ACID INTO THE PEPTIDE PRODUCT AND CAN BE FURTHER SUBDIVLDED INTO DOMAINS RESPONSIBLE FOR SUBSTRATE ADENYLATION, THIOLATION, CONDENSATION (NOT FOR THE INITIATION MODULE), AND EPIMERIZATION, CONDENSATION METATALISM (OPTIONAL).

N METATLATION (OPTIONAL).

N METATLATION (OPTIONAL).

N MISCELLANEOUS: BACITRACIN IS A MIXTURE OF AT LEAST TEN CYCLIC DODECAPEPTIDE, THAT DIFFER BY ONE OR TWO AMINO ACIDS. THE MOST ABUNDANT IS BACITRACIN A, BRANCHED CYCLIC DODECAPEPTIDE. IT CONTAINS AN N-TERMINAL LINEAR PENTAPEPTIDE MODIETY (ILE-CYS-LEU-D-PRODUCT AND A C-TERMINAL HIPSTAPEPTIDE RING (LYS-D-ORN-ILE-D-PHE-HIS-D-ASP-ASN), IN WHICH THE FREE ALPHA-CARBOXY GROUP OF THE C-TERMINAL ASN IS BOUND TO THE EPSILON-AMINO GROUP OF LYSINE. IT CONTAINS FOUR AMINO ACIDS IN THE D-CONFIGURATION (GLU-4, ORN-7, PHE-9, AND ASP-11)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            15-JUL-1999 (Rel. 38, Created)
15-JUL-1999 (Rel. 38, Last sequence update)
28-FEB-2003 (Rel. 41, Last annotation update)
Bacitracin synthetase 3 (BA3) [Includes: ATP-dependent isoleucine adenylase (IleA) (Isoleucine activase); ATP-dependent D-phenylalanine adenylase (D-phen) (D-phenylalanine activase); ATP-dependent histidine adenylase (HisA) (Histidine activase); ATP-dependent D-aspartate adenylase (D-AspA) (D-aspartate activase); ATP-dependent asparagine adenylase (AsnA) (Asparagine activase); ATP-dependent asparagine adenylase (AsnA) (Asparagine activase); ASpartate racemase (EC 5.1.1.13); Phenylalanine racemase (ATP hydrolyzing)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BACLI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              BACC

SUBUNIT: The
enzyme which
                                                                                                                                                                                                                                                                                                                                                                         . J. Syst. Bacteriol. 46:1004-1009(1996).
FUNCTION: DNA-dependent RNA polymerase cataly:
of DNA into RNA using the four ribonucleoside
                                                                                                                                                                                                                                                                                   beta' chain.
SIMILARITY: Belongs to the RNA polymerase beta' chain family.
                                                                                                                                                                                                                                                                                                                                                    CATALYTIC ACTIVITY: N
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEIHE

                                                                                                                                                                                                                                    Biol. Chem. 273:5794-5800 (1998).

FUNCTION: Seems to be required for maintenance of peripheral nerwingelin sheath. May have a role in axon-glial interactions, possibly by interacting with the cytoplasmic domains of integral membrane proteins such as myelin-associated glycoprotein in the periaxonal regions of the Schwann cell plasma membrane. May have role in the early phases of myelin deposition.
         DOMAIN: The Arg/Lys-rich basic domain funct
nuclear localization signal.
PTM: The N-terminus is blocked.
SIMILARITY: Belongs to the periaxin family.
SIMILARITY: Contains 1 PDZ/DHR domain.
                                                                                                                              Name=2; Synonyms=S-periaxin;
IsoId=063425-2; Sequence-VSP 004368,
TISSUE SPECIFICITY: NEURONES, SCHWANN
DEVELOPMENTAL STAGE: MRNA AND PROTEIN
NERVE BETWEEN POSNATAL DAYS 8 AND 20;
                                                                         DOMAIN: Has a remarkable domain of sometimes followed by a tripeptide functional basic and acidic domains
                                                                                                                                                                                                 Name=1; Synonyms=L-periaxin; IsoId=Q63425-1; Sequence=Displayed;

                                                                                                                                                                                                                                          Mol. Cell. Biol. 16:1203-1211(1996).

-I-FUNCTION: Transcription factor for tyrosinase and tyrosinase-
related protein 1. Binds to a symmetrical DNA sequence (E-boxes)

(5'-CACGTG-3') found in the tyrosinase promoter. Plays a critical 
role in the differentiation of various cell types as neural crest-
derived melanocytes, mast cells, osteoclasts and optic cup-derived 
retinal pigment epithelium.

-I-SUBUNIT: Efficient DNA binding requires dimerization with another 
bHLH protein. Binds DNA in the form of homodimer or heterodimer 
with either TPE3, TPEB or TPEC.

-I-SUBCELLULAR LOCATION: Nuclear.

(MI-EW) HAS A NORMAL APPEARANCE AT THE HETEROZYGOUS STATE, BUT SHOWS WHITE COAT; EYES ALMOST ABSENT AND EYELLDS NEVER OPEN AT HOMOZYGOSITY, MICROPHTHALMIA-BLACK AND WHITE SPOT (MI-EWS) IS NORMAL AT HETEROZYGOSITY, AND PRESENTS WHITE SPOT SAND BLACK EYES AT HOMOZYGOUS STATE. MICROPHTHALMIA-WHITE (MI-WH) HAS REDUCED COAT COLOR AND EYE PIGMENTATION; SPOTS ON TOES, TAIL AND BELLY; INNER EAR DEFECTS AT HETEROZYGOSITY, AND AT HOMOZYGOSITY SHOWS WHITE COAT; EYES SMALL AND INNER IRIS SLIGHTLY PIGMENTED; SPINAL GANGLIA, ADRENAL MEDULLA AND DERMIS SMALLER THAN NORMAL, AND INNER EAR DEFECTS. MICROPHTHALMIA-VITILIGO (MI-VI) HAS NORMAL PHENOTYPE AT HETEROZYGOSITY, BUT SHOWS GRADUAL DEPIGMENTATION OF COAT, SKIN AND EYES, AND RETINAL DECENERATION AT HOMOZYGOSITY. HOWEVER, TYROSIMASE NORMAL PHENOTYPE; AT HOMOZYGOSITY, HOWEVER, TYROSIMASE NORMAL PHENOTYPE; AT HOMOZYGOSITY, HOWEVER, TYROSIMASE NORMAL PHENOTYPE; AT HOMOZYGOSITY, HOWEVER, TYROSIMASE ACTIVITY IN SKIN IS REDUCED. PIGMENTATION AT HOPESCTIVE IRISM (MI-DI) HAS REDUCED RETINAL DISMENTATION AT HOPESCTIVE IRISM SHOWS WHITE COAT; EYES OF REDUCED AND SHOWS WHITE COAT; EYES OF PROCESSION AND SHOWS WHITE COAT; EYES OF REDUCED AND SHOWS WHITE COAT; EYES OF REDUCED AND SHOWS WHITE COAT; EYES OF THE MOTOR SHOWS HOW THE COAT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PTM: PHOSPHORYLATION AT SER-405 SIGNIFICANTLY ENHANCES THE ABILITY TO BIND THE TYROSINASE PROMOTER (BY SIMILARITY).

DISEASE: DEFECTS IN MITF ARE THE CAUSE OF MICROPHTHALMIA (MI), A CONDITION CHARACTERIZED BY LOSS OF PICHENTATION; REDUCED EYE SIZE; FAILURE OF SECONDARY BONE RESORPTION; REDUCED NUMBERS OF MAST
                                                                                                                           REDUCED SIZED AND POSSIBLE MILD OSTBOPOROSIS AT HOMOZYGOSITY.

MICROPHTHALMIA-CLOUDY EYED (MI-CE) HAS A NORMAL APPEARANCE AT THE
HETEROZYGOUS STATE, BUT SHOWS WHITE COAT; EYES OF REDUCED SIZE AND
UNPICHENTED AT HOMOZYGOSITY. MICROPHTHALMIA-RED-EYED WHITE (MI-RW)
HAS A NORMAL APPEARANCE AT THE HOMOZYGOUS STATE, BUT SHOWS WHITE
COAT WITH ONE OR MORE PIGMENTED SPOTS AROUND THE HEAD/AND OR TAIL;
EYES ARE SMALL AND RED AT HETEROZYGOSITY. MICROPHTHALMIA-BLACK-
EYED WHITE (MI-BW) SHOWS A WHITE COAT BUT NORMAL SIZED EYES WHICH
REAMIN BLACK AT HOMOZYGOSITY.
SIMILARITY: Contains 1 basic helix-loop-helix (bHLH) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             lung, spleen and brain. In the embryo, expressed in developing eye, ear, skin and heart. Isoform M is expressed in melanocytes and also in the embryonic and adult heart while isoforms A and H are more widely expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TISSUE SPECIFICITY:
